

Dear Ruby

I am writing to congratulate you on your academic achievement in Semester 1, 2017. I am pleased to advise that you placed among the top three students in one of your units of study:

- In MKTG1001: Marketing Principles, you placed 1st out of 581 students with a mark of 89.

The Business School is committed to providing a university education that is at the cutting edge of knowledge, is intellectually rigorous, and has contemporary and professional relevance. Our undergraduate student body comprises of high-achieving local and international students.

Your achievements are particularly outstanding given the high calibre of your peers.

Sincerely,

A handwritten signature in blue ink, appearing to be 'Rae Cooper', with a stylized, cursive script.

Associate Professor Rae Cooper
Associate Dean (Undergraduate Business)

Product:

What is a product? Anything offered to a market for attention/acquisition/use etc.
That might satisfy need/want (many products can satisfy same need)
→ physical goods, services, experiences

- Consumer products:
 - FMCG/non durable: single/few use
 - Durable: extended use
- Industrial products
- Organisations, persons, places, events, ideas

Competitive marketing strategies:

- Better product, market price
- Same product, lower price

'Anything' marketing:

- Event: physical products with services → product in own right
- Person: high profile – generate \$, e.g. Oprah
- Political
- Cause related: social impact, change attitudes/behaviour (diff from brand with cause e.g. Dove)
- Not-for-profit → ultimately leads to contribution
- Experiences: consumers actively involved

Total product:

1. *Core product*: what are they really buying? → need satisfied
2. *Actual product*: as many as 5 characteristics; quality level, features, styling, a brand name & packaging → how we see product in market place
3. *Augmented product*: add services/benefits, often point of differentiation

Product differentiation: most common strategy, monopoly over segment of market represented by loyal customers

→ compete at individual product level through

- Product, services, personnel, channel, brand, first mover adv

Services:

Intangible (challenge to tangibilise)

→ inseparability (synchronise delivery + consumption of service)

→ variability (bc of insuperability)

→ perishability (difficult to manage demand)

+3ps: people, process, physical element

New product development:

Original product, improvements/modifications etc. R&D

Driven by: changing consumer tastes, tech, comp + customer wants/expectations

Obtained through: acquisitions (firms, patents) or NPD process

Why introduce new products?

- *Growth* → new sales from existing/new markets
- *Leverage* → brand relationships, existing resources
- *Adapt* → changing needs, tech etc.
- *Defend* → match/beat comp

Types of new products:

	Description	Risks
New to world	<ul style="list-style-type: none">• Brand new invention – not available in market before• Using capabilities to create monopoly/leapfrog• Every step of NPD	<ul style="list-style-type: none">• Huge upfront expense
New to firm	<ul style="list-style-type: none">• Existing product, new type of product to firm	<ul style="list-style-type: none">• Unfamiliar market• Established competition
Repositioning	<ul style="list-style-type: none">• Change image/use or target market for existing product	<ul style="list-style-type: none">• Significant costs• Give up existing sales
Product line extension	<ul style="list-style-type: none">• Variety of existing product already offered• Leveraging existing brand success etc.	<ul style="list-style-type: none">• Cannibalising sales• Damage brand
Product improvement	<ul style="list-style-type: none">• Enhancing existing product against comp	<ul style="list-style-type: none">• ↑ cost, poor market acceptance

Continuum of Perceived Product Newness

Nature of innovation:

2 dimensions

- How much the user must change behaviour
- How new innovation is for user

Pricing strategies:

<i>Customer value based pricing</i>	<ul style="list-style-type: none"> • Buyers perception of value → set price accordingly, outside in • Price considered with other marketing mix variables <i>before</i> marketing program set → use other tools to ↑ value • <i>Everyday low pricing</i>: constant low price with few discounts • <i>Value added</i>: add features/services to differentiate and support price ↑ (i.e. perception of value)
<i>Cost based pricing</i>	<ul style="list-style-type: none"> • Cost of producing/distribution/selling products + fair rate of return, inside out • Key = manage spread between costs + prices, how much company makes for customer value delivered • <i>Mark up/cost plus</i> • <i>Break even/targeting pricing</i>: cost = revenue, how many units needed to break even given price
<i>Competition based pricing</i>	<ul style="list-style-type: none"> • Following competition – charge same/below/above depending on positioning/value relative to comp
<i>New product:</i>	
<i>Market skimming (new product)</i>	<ul style="list-style-type: none"> • High \$ to skim max revenue at introduction stage → fewer but more profitable sales • Inelastic demand → luxury products
<i>Market penetration pricing (new product)</i>	<ul style="list-style-type: none"> • Low \$ to attract large no. of buyers/large market share • Elastic demand curve • Economies of scale to be gained
<i>Product mix pricing</i>	
<i>Product line pricing</i>	<ul style="list-style-type: none"> • Price steps between product line items (19.95, 39.95)
<i>Optional product/service</i>	<ul style="list-style-type: none"> • Added stuff e.g. free transfers
<i>Captive product pricing</i>	<ul style="list-style-type: none"> • Products necessary for main product → fixed fee/price + variable usage rate e.g. Printers + cartridges
<i>By-product pricing</i>	<ul style="list-style-type: none"> • Pricing low value by products to get rid of them e.g. Pet food from meat products
<i>Product bundle pricing</i>	<ul style="list-style-type: none"> • Sold together → lower price than when bought individually e.g. Holiday packages
<i>Situational pricing</i>	
<i>Discount/allowance pricing</i>	<ul style="list-style-type: none"> • Reward customer responses e.g. paying early
<i>Segmented pricing</i>	<ul style="list-style-type: none"> • Differences in customers/locations/products e.g. students
<i>Psychological pricing</i>	<ul style="list-style-type: none"> • Adjust \$ for psychological effect → influence perception of value • Reference \$: \$ consumer carries in mind – can be influenced through pricing cues e.g. shelf placement, sale (red), 19.95 pricing
<i>Promotional pricing</i>	<ul style="list-style-type: none"> • Temporarily ↓ \$ to ↑ short term sales
<i>Dynamic prices</i>	<ul style="list-style-type: none"> • Continually adjusted to meet needs of customer /situations e.g. hotel promotions
<i>Geographic pricing</i>	<ul style="list-style-type: none"> • Adjusted for international markets (taxes, tariffs)
