

CONTENTS

Week 1 – Introduction	3
Basics of information systems-1	3
Basics of information systems-2.....	3
Basics of information systems-3.....	3
Types of care	4
Ambulatory care (clinic/practice).....	4
Acute care (hospital).....	4
subacute care.....	4
Healthcare info systems	4
clinical IS	4
administrative is.....	4
wrong with healthcare?.....	5
HEalthcare IS help?	5
week 2 – clinical info systems data standards ehr/PHR.....	5
Computerized physician order entry (CPOE)	5
electronic medication administration record (eMar).....	5
Workflow.....	6
Definitions	7
EHR.....	7
PHR – personal health record	8
cerner emr2 in nsw	8
HealtheNet.....	8
Standards	8
standards development process	8
Organizations.....	8
data quality	9
problems with poor quality data.....	9
strategy to improve data quality	9
Activities to improve data quality	9
week 3 – PACS	10
Picture archiving and communication system (PACS)	10
architecture and workflow	10
DICOM	12
HL7	12
pacs architectures	12
pacs and phr.....	12
DICOm structured reporting.....	12

enterprise pacs	12
Vendor neutral solution (VNS)	13
Cloud pacs	13
benefits	13
teleradiology	13
teleradiology operating models.....	13
Risks and concerns	13
International teleradiology	13
week 4 – Healthcare data analysis	14
Who can benefit.....	14
integrating big data	14
big data in healthcare	14
Big data – 5 V + 1 C	14
Data warehouse.....	15
data warehouse applications – 3	15
IBM WATSON	16
MAyo clinic enterprise data trust.....	16
visualisation	16
Visualisation pipeline (AFMR)	16
Healthcare info visualisation	17
week 5 – Healthcare Technology evaluation	19
HTA Lifestyle and process.....	19
HTA different stages	20
R&D to implementation.....	21
evidence through kpi's	21
systematic review – to evaluate research outcomes	22
why conduct systematic reviews	22
procedure	22
usability and user perspective	23
Case studies	23
Teleoncology in Australia.....	23
dermoscopy	23
Week 6 – Telehealth and mobile health.....	23
Challenges	23
remote patient monitoring	24
Mobile Apps	24
telehealth examples	24
Week 7 – Ethics/governance	25
Information security.....	25

Social engineering.....	25
Technical safeguards.....	25
security objectives for impact analysis.....	27
Plans	28
business continuity challenge	28
ethics, privacy and governance.....	28
Ethical Framework	28
code of conduct.....	29
Week 8 – Health care data statistics	29
Week 9 – Clinical decision support systems	32
Week 10 - Personalized, precision medicine	35
Week 11.....	36
guest lecture.....	36
AMBIENT assisted Living (AAL)	36
Week 12.....	36
Nepean Telehealth technology centre	36
integrated care fund.....	38
integrated care initiative	38
proposal – steps involved.....	38
SAMPLE Questions	39

WEEK 1 – INTRODUCTION

BASICS OF INFORMATION SYSTEMS-1

Info system is made up of –

- Data
- Functions
- People (Users)
- Technology – collect, process, store and provide output the info needed by org

BASICS OF INFORMATION SYSTEMS-2

IS used by every function of org (resource planning, decision making, forecasting, coordination and operations)

- Functional Area IS – IS for specific functional areas (HR, accounting, marketing)
- Specialised / departmental IS

BASICS OF INFORMATION SYSTEMS-3

Advantages of IS

- High speed, high volume computations
- Vast amounts of data interpret quickly and efficiently
- Automate – semi automatic and manual processes
- Communication and collaboration (inter/ intra hospitals)
- Storage – huge amount of data that is easy to access

TYPES OF CARE

AMBULATORY CARE (CLINIC/PRACTICE)

No overnight stay (outpatient)

Single chart maintained – having all info like test results, notes for each visit updated in the same chart

Central element of chart – **physician's exam note**

ACUTE CARE (HOSPITAL)

Overnight/ longer stay (inpatient)

New chart every time patient is admitted – **Patient** ID used to link – comprehensive chart

Central element – physician's **orders** and nurses **notes** with patient **response**

SUBACUTE CARE

Patients whose nursing needs – less frequent and intensive. Includes (3 types)-

REHABILITATION

Inpatient | addiction therapy, occupational therapy, physical medicine

LONG TERM CARE

Inpatient less intense than acute care | Length of stay **> 30 days** | nursing homes, residential care facilities

HOME CARE

Healthcare provided at **patient's home**

HEALTHCARE INFO SYSTEMS

CLINICAL IS

Health related info to help in patient care

EXAMPLES OF CLINICAL APPS

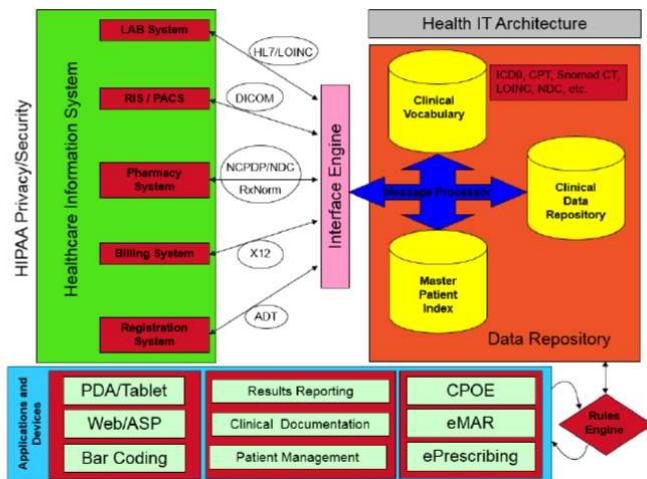

- Specialised IS – laboratory, radiology, pharmacy
- Other – Electronic medical record (EMR), Telemedicine, Telehealth, Rehab service doc

ADMINISTRATIVE IS

Administrative or financial data | support management functions and general operations of the org

EXAMPLES OF ADMINISTRATIVE APPS

- Patient admin systems – scheduling, billing, discharge, admission
- Financial management systems – accounts payable, payroll, personnel management

Components of IS

Different levels of healthcare IS – Department level -> hospital -> district -> state -> national

WRONG WITH HEALTHCARE?

Fragmentation – leads to miscommunication and errors | duplicate testing

Data storage – data stored in many ways and locations (tacit knowledge, paper, silos within firewalls) | inaccurate, incomplete or unclear

Education – continuous education a challenge

HEALTHCARE IS HELP?

- Provide data needed in the exam room
- Clinical decision support – evidence based care
- Prevention and patient education
- Patient satisfaction
- Documentation process
- Communication – coordinate care delivery
- Manage busy workflows
- Long distance patient care
- Reduce cost of care

WEEK 2 – CLINICAL INFO SYSTEMS | DATA STANDARDS | EHR/PHR

COMPUTERIZED PHYSICIAN ORDER ENTRY (CPOE)

- Replace paper-based ordering system
- Electronically write orders, medication administration record, review changes made by successive personnel
- Alerts for unsafe order | duplicate drug therapy | suggest less expensive and alternate choices

ELECTRONIC MEDICATION ADMINISTRATION RECORD (EMAR)

- Automatically document the admin of medication into EHR tech using RFID, sensors
