

FNCE10002 – Principles of Finance

Study Notes

Contents

1 Finance, Cash Flows and Firm Value	1
1.1 What finance studies	1
1.2 Corporations and financial claims	1
1.3 Primary and secondary markets	2
1.4 Four foundations	2
1.4.1 Cash flows occur at different times	2
1.4.2 Risk and expected return move together	2
1.4.3 Value depends on expected cash flows and required returns	2
1.4.4 The corporate objective is to maximise firm value	3
2 Time Value of Money	4
2.1 Valuation dates and timelines	4
2.2 Simple interest	4
2.3 Compound interest	5
2.4 Solving for the rate or the horizon	6
2.5 Stated and effective rates	6
2.6 Sensitivity of present and future values	7
3 Annuities, Perpetuities and Loans	8
3.1 Recognising the cash-flow pattern	8
3.2 Ordinary annuities	8
3.3 Annuities due	9
3.4 Deferred annuities	9
3.5 Growing annuities	10
3.6 Perpetuities	11
3.7 Mixed cash-flow problems	12
3.8 Amortising loans	12
4 Debt Securities	14
4.1 Debt as a tradable claim	14
4.2 Short-term debt securities	14
4.2.1 Treasury notes, promissory notes and bills of exchange	15
4.2.2 Return from trading before maturity	15
4.3 Coupon-paying bonds	16
4.3.1 Premium, par and discount bonds	17
4.3.2 Semi-annual coupons	17
4.4 Price, yield and risk	18
4.5 Green bonds	18

5 Equity Securities and Market Efficiency	19
5.1 Ordinary equity	19
5.2 Trading and market data	19
5.2.1 Price-earnings ratio	19
5.3 Why an ordinary share has value	19
5.3.1 Constant dividends	20
5.3.2 Constant dividend growth	20
5.3.3 Dividend yield and capital gains	21
5.3.4 Non-constant growth	21
5.4 Earnings, payout and growth	22
5.5 Preference shares	22
5.6 Information and market efficiency	23
6 Returns, Risk and Diversification	24
6.1 Realised holding-period returns	24
6.2 Arithmetic and geometric averages	24
6.3 Historical variability	25
6.4 Nominal and real returns	25
6.5 Forward-looking expected return and risk	25
6.5.1 Normal-distribution interpretation	26
6.6 Risk preferences	27
6.7 Portfolio expected return	27
6.8 Covariance and correlation	27
6.9 Two-asset portfolio risk	27
6.9.1 Three benchmark correlation cases	28
7 Portfolio Choice, Leverage and Short Selling	29
7.1 Efficient portfolios	29
7.2 Adding a risk-free security	29
7.3 Portfolio leverage	29
7.4 Short selling	30
7.5 Limits to diversification	31
8 Capital Asset Pricing Model	33
8.1 What the model prices	33
8.2 Assumptions	33
8.3 The market portfolio	33
8.4 Beta	33
8.5 The Security Market Line	34
8.6 CML and SML	35
8.7 Portfolio beta	35
8.8 Estimating beta	35
8.9 Security selection	36
